InfoLink

Graphics To Display Critical Information

Quickly and easily create professional looking graphics and displays using InfoLink. Incorporating the industry standard graphics symbols from Software Toolbox, InfoLink allows users to see the real-time graphical representation of their equipment and process. Over 4,000 different symbols are available for use.

InfoLink lets you display critical information and Key Performance Indicators (KPI) in real-time. Placing a KPI in a prominent location alerts your operators and users quickly when critical values change that affect your process. Including TrendLink trends and graphs, visualization into theCanary Enterprise Historian data is easily combined with the graphic symbols.

InfoLink integrates with TrendReporter powered by XLReporter from SyTech, the leading provider of automated reporting and data analysis. Data from the Canary Enterprise Historian can be formatted into high-quality reports that can be stored and viewed through standard Web browsers. Using InfoLink, report generation and viewing is only a click away.

InfoLink includes a Playback Mode that uses the Canary Enterprise Historian to drive displays using historical data to look at the past. All InfoLink graphics and trends show the archived data exactly as it happened. View data at a user specified playback speed or pause and step through critical time data to observe and learn from past failures. Playback Mode may also be used for training sessions by utilizing the replay, stop and slow motion features to teach what happened at critical transitions from past events.

Key Features

- Create professional looking graphics using a library of over 4,000 industry standard symbols

- Display Key Performance Indicators (KPI) in real-time

- Multiple layers with quick tab access

- Integrates with HTML-based applications

- Integrates with TrendReporter for advanced report generation and data analysis

- Playback Mode

- LogBook feature available as an add-in
